FTD Introduction to Intelligent Translation Software

Put on your headphones and instantly understand the world, chatting freely without boundaries!

- Instant translation: menus, road signs, manuals—simply point your camera and instantly translate into your native language.
- Real-time conversation translation: communicate seamlessly across borders without interruption.
- Voice note taking: Record meetings or lectures with a single click, convert voice to text and translate into multiple languages, ensuring no important information is missed. Let language become your superpower, and the world will be within your reach!

Preparation before use

1. Download and installation

1.1 Download methods

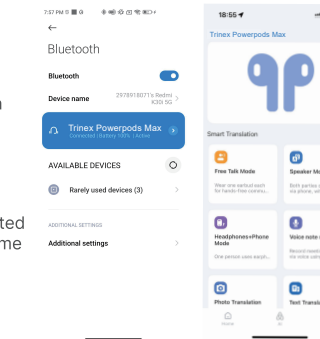

- Search and download from major app stores.
- Scan the QR code below to download and install.

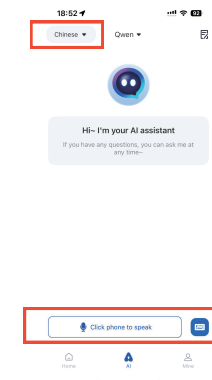

2. Connection and Authorisation

2.1 Connection Pairing

- Turn on your mobile phone's Bluetooth and search for available devices.
- Find the headphones you want to pair with and click 'Pair' to connect.
- Open the VoxNex app and the connected headphones will be displayed on the home page.

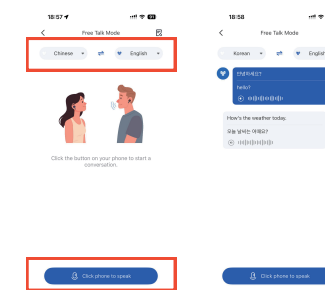

Your AI Smart Assistant

- Click on the top left corner to switch languages at any time.
- Click to speak or type in text, and get real-time answers to your questions—whether it's translation challenges, travel tips, or work and study advice, AI can intelligently analyse your needs and instantly provide professional answers to help you solve problems efficiently!

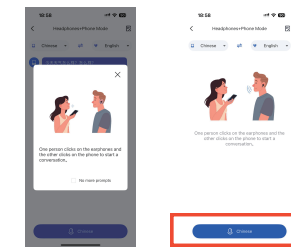

Multiple translation modes to suit your needs

1. Free Talk Mode

Each person wears a headset, suitable for familiar situations. Select the conversation language at the top, click to start speaking and translating, and the headset will automatically recognise both languages, automatically punctuate sentences, and translate in real time, freeing up your hands.

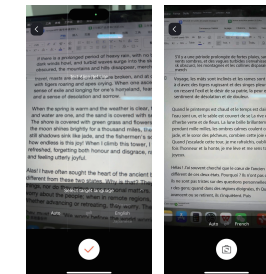

2. Headphone + Phone Mode

One person wears the headphones, and the other uses the mobile phone.

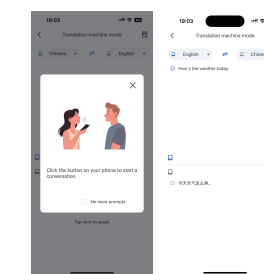

One person clicks/double-clicks the headphones to activate the translation function (activation settings are the same as the default play/pause button settings on the headphones), and the other person taps the headphones to activate speech, with the mobile phone playing the translation aloud. Suitable for conversations with strangers, such as ordering at a restaurant abroad.

3. Photo Translation

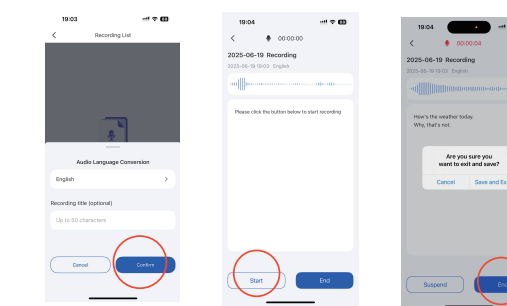

Supports automatic detection, with 56 source languages and 20 target languages supported, enabling real-time language translation.

4. Speaker mode

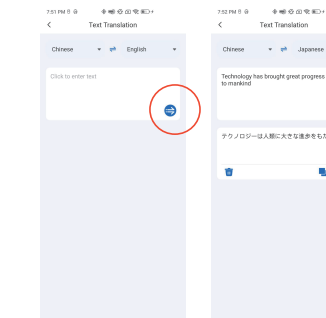

This feature is similar to a traditional translator. You can translate by clicking the language button on the page, and the mobile phone speaker will broadcast the translated language. It is suitable for communicating with strangers without wearing headphones such as when travelling abroad or asking for directions.

5. Voice Note Mode

Record voice in real time, automatically recognise language and convert it to text output, quickly and accurately recording meeting content. Supports multiple language recognition and real-time text output. A great tool for improving work efficiency!

6. Text translation

Enter text to get instant translations, suitable for situations where it is inconvenient to speak. Supports external paste for direct translation. Click to copy the translated content with one click, saving you time and effort!
